Change For a Dollar?

SAGE Global Market Perspective: Change for a Dollar?

With U.S. corporations reporting better-than-feared earnings and domestic bond yields much higher than their international developed counterparts, there is no surprise that the U.S. dollar remains strong against common foreign currencies. Although there are specific near-term events and decisions that many believe will weaken the U.S. dollar, we believe that nothing short of significant unexpected growth abroad is capable of reversing this trend.

As this earnings season concludes, it appears to us that results as a whole have been better than feared, thanks to the continued support of the U.S. consumer. However, it is clear that earnings growth has slowed when compared to the robust performance recorded last year, much of which was a direct result of a lower corporate tax rate. Furthermore, even with the recent dramatic decline in bond yields, domestic yields remain positive, which is not necessarily the case for all debt instruments in other developed countries. Solid earnings due to strong consumption coupled with relatively higher yields, has boosted the demand for U.S. dollar denominated assets, supporting the strength of the U.S. dollar.

We believe it is safe to say that there are a number of repetitive headlines swirling, one of which is the economic concerns related to a strong U.S. dollar. There seems to be a common notion that if the Federal Reserve lowers the Fed Funds Rate that the U.S. dollar will weaken. In late July we witnessed the first rate cut since 2008, which was communicated by the Federal Reserve as being a preemptive decision to combat the potential negative impacts caused by a prolonged and seemingly escalating trade dispute between China and the United States. Although we trust this was the Federal Reserve's primary objective, we believe the 0.25% rate cut was also intended to provide breathing room for foreign central banks in greater need of stimulating their respective economies.

Without a Federal Reserve rate cut, additional stimulus by foreign central banks runs the risk of further devaluing their currencies against the U.S. dollar, which could result in further loss of capital investment vital to sustaining economic growth.

Since the July rate cut, as expected, many foreign central banks quickly acted by cutting their benchmark rates. Although it appears that additional rate cuts both domestic and abroad are on the horizon, investors will be closely monitoring global economic data, looking for any indication of whether or not synchronized global monetary stimulus can extend the longest bull market. It is our belief that fiscal stimulus by foreign governments, in tandem with accommodative monetary policy, is crucial to sustaining growth abroad. Until we see evidence of this occurring, we believe investors will continue to seek relatively higher yielding U.S. debt and the consistently stable earnings growth from U.S. corporations, supported by a healthy U.S. consumer base.

At the risk of sounding somber, it is difficult to determine whether or not the U.S. economy is impervious to declining economic activity abroad, but there are various metrics and sources we follow to aid in our efforts to best understand these pressures. For the time being, the global economy is expected to grow, be that as it may at a slower pace.

Fundamentals in the U.S. remain strong with unemployment near record lows, consumption steadily higher and inflation subdued. Furthermore, we have a Federal Reserve seemingly willing to support the economy if negative headwinds impede progress. For these reasons, we remain confident in our significant overweight position to U.S. stocks versus International stocks.

RSVP Today – September 19, 4-8 PM!
Our Client Appreciation Event on September 19th is quickly approaching! We look forward to celebrating the addition of our beautiful expanded office space with you. The event will be held at our office at One Lincoln Centre from 4-8PM. We will have great food, beverages, entertainment, and a tour of our new office. RSVP today by calling Jacqueline Cornwell at (630) 933-0000 or email us at RSVPevent@sageprivatewealth.com. Thanks to all who have completed our 2019 Client Experience Survey! Measuring your experience and expectations is only part of the story you will tell us. Understanding your expectations or the importance you attach to different offerings will allow us to better plan for resources to address those expectations for you. We are compiling your feedback and will share the outcome in the coming months.

Five Retirement Lessons from Today's Retirees

EBRI consistently finds that setting a savings goal increases the level of confidence among today's workers. Despite that fact, just 42% of survey respondents have tried to determine a total retirement savings goal, and less than one-third have tried to calculate how much they may need for medical expenses. Of those who have calculated a total savings goal, 34% have found they will need \$1 million or more to retire comfortably.

Source: 2019 Retirement Confidence Survey, EBRI

Each year for its Retirement Confidence Survey, the Employee Benefit Research Institute (EBRI) surveys 1,000 workers and 1,000 retirees to assess how confident they are in their ability to afford a comfortable retirement. Once again, in 2019, retirees expressed stronger confidence than workers: 82% of retirees reported feeling "very" or "somewhat" confident, compared with 67% of workers. A closer look at some of the survey results reveals various lessons today's workers can learn from current retirees.

Current sources of retiree income

Let's start with a breakdown of the percentage of retirees who said the following resources provide at least a minor source of income:

- Social Security: 88%
- Personal savings and investments: 69%
- Defined benefit/traditional pension plan: 64%
- Individual retirement account: 61%
- Workplace retirement savings plan: 54%
- Product that guarantees monthly income: 33%
- Work for pay: 25%

Lesson 1: Don't count on work-related earnings

Perhaps the most striking percentage is the last one, given that 74% of today's workers expect work-related earnings to be at least a minor source of income in retirement. Currently, just one in four retirees works for pay.

Lesson 2: Have realistic expectations for retirement age

Building upon Lesson 1, it may benefit workers to proceed with caution when estimating their retirement age, as the Retirement Confidence Survey consistently finds a big gap between workers' expectations and retirees' actual retirement age.

In 2019, the gap is three years: Workers said they expect to retire at the median age of 65, whereas retirees said they retired at a median age of 62. Three years can make a big difference when it comes to figuring out how much workers need to accumulate by their first year of retirement. Moreover, 34% of workers reported that they plan to retire at age 70 or older (or not at all), while just 6% of current retirees fell into this category. In fact, almost 40% of retirees said they retired before age 60. The reality is that more than four in 10 retirees retired earlier than planned, often due to a health issue or change in their organizations.

Estimating retirement age is one area where workers may want to hope for the best but prepare for the worst.

Lesson 3: Income is largely a result of individual savings efforts

Even though 64% of current retirees have defined benefit or pension plans, an even larger percentage say they rely on current savings and investments, and more than half rely on income from IRAs and/or workplace plans. Current workers are much less likely to have defined benefit or pension plans, so it is even more important that they focus on their own savings efforts.

Fortunately, workers appear to be recognizing this fact, as 82% said they expect their workplace retirement savings plan to be a source of income in retirement, with more than half saying they expect employer plans to play a "major" role.

Lesson 4: Some expenses, particularly health care, may be higher than expected

While most retirees said their expenses were "about the same" or "lower than expected," approximately a third said their overall expenses were higher than anticipated. Nearly four out of 10 said health care or dental expenses were higher.

Workers may want to take heed from this data and calculate a savings goal that accounts specifically for health-care expenses. They may also want to familiarize themselves with what Medicare does and does not cover (e.g., dental and vision costs are not covered) and think strategically about a health savings account if they have the opportunity to utilize one at work.

Lesson 5: Keep debt under control

Just 26% of retirees indicated that debt is a problem, while 60% of workers said this is the case for them. Unfortunately, debt can hinder retirement savings success: seven in 10 workers reported that their non-mortgage debt has affected their ability to save for retirement. Also consider that 32% of workers with a major debt problem were not at all confident about having enough money to live comfortably in retirement, compared with just 5% of workers who don't have a debt problem.

As part of their overall financial strategy, workers may want to develop a plan to pay down as much debt as possible prior to retirement.

Social Security: Shoring Up America's Safety Net

Future projections

In 2019, the trustees of Social Security reported that the Old-Age and Survivors Insurance (OASI) trust fund is projected to run out in 2034. At that time, payroll tax revenue alone would be sufficient to pay 77% of scheduled benefits.

Ever since a legal secretary named Ida May Fuller received the first Social Security retirement check in 1940, Americans have been counting on Social Security to provide much-needed retirement income. For many older Americans, Social Security is their main source of guaranteed retirement income — income that continues throughout their lifetimes and is indexed for inflation every year (in 2019, the cost-of-living adjustment, or COLA, was 2.8%).

Social Security provides more than just retirement income, though. It also provides disability and survivor insurance benefits. About 62 million people — more than one in six U.S. residents — collected some type of Social Security benefit in 2018, with approximately 80% of these recipients receiving Social Security retirement or survivor benefits.¹

How Social Security works

Social Security is a pay-as-you-go system, which means that payments from current workers (in the form of payroll taxes) fund benefits for current beneficiaries. The payroll tax rate for Social Security is 12.4%, with 6.2% paid by the employee and 6.2% paid by the employer (self-employed individuals pay the entire 12.4%). These payroll taxes are deposited into the Old-Age and Survivors Insurance (OASI) trust fund (for retirement and survivor benefits) and the Disability Insurance (DI) trust fund (for disability payments).

Because of demographic and economic factors, including higher retirement rates and lower birth rates, there will be fewer workers per beneficiary over the long term, worsening the strain on the trust funds. This year, the trustees of Social Security reported that the OASI trust fund is projected to run out in 2034. After that, payroll tax revenue alone would be sufficient to pay 77% of scheduled benefits.

Ideas for reform

There has been little national consensus by policymakers on how to deal with Social Security's looming demographic challenges. Meaningful reform will require broad bipartisan support, and the trustees have urged Congress to address Social Security's challenges sooner rather than later, so that solutions will be less drastic and can be implemented gradually, lessening the impact on the public.

Some Social Security reform proposals on the table include:

- Raising the current Social Security payroll tax rate — according to the 2019 trustees report, an immediate and permanent payroll tax increase to 15.1% (up from the current 12.4%) would be necessary to address the

long-range revenue shortfall (16.05% if the increase started in 2035)

- Raising or eliminating the ceiling on wages currently subject to Social Security payroll taxes (\$132,900 in 2019)
- Raising the full retirement age beyond the currently scheduled age of 67 (for anyone born in 1960 or later)
- Reducing future benefits — to address the long-term revenue shortfall, the trustees have noted that scheduled benefits would have to be immediately and permanently reduced by about 17% for all current and future beneficiaries, or by approximately 20% if reductions were applied only to those who initially become eligible for benefits in 2019 or later
- Changing the formula that is used to calculate benefits
- Changing the formula that is used to calculate the annual cost-of-living adjustment for benefits

Understand your retirement benefits

The amount you'll receive from Social Security is based on the number of years you've worked, the amount you've earned over your lifetime, and the age when you file for benefits. Your benefit is calculated using a formula that takes into account your 35 highest earnings years, but you don't need to work for that long to qualify for retirement benefits. Generally, you need to have earned a minimum of 40 work credits, which is about 10 years of work in a job covered by Social Security. If you haven't worked long enough to qualify on your own, you may qualify for spousal benefits based on your spouse's work record. A spousal benefit claimed at your full retirement age is generally equal to 50% of the primary worker's full benefit.

You can get an estimate of your future Social Security retirement benefits by visiting the Social Security website at ssa.gov and using the Retirement Estimator tool or by viewing your Social Security Statement. Your personalized statement contains a detailed record of your earnings history, as well as estimates of the retirement, survivor, and disability benefits you can expect at different ages. To view your statement online, you'll first need to register. If you haven't registered online, you'll receive your Social Security Statement in the mail every year if you are age 60 or older and not yet receiving benefits.

When should I file the FAFSA?

The FAFSA, which stands for Free Application for Federal Student Aid, is the federal government's financial aid application. The FAFSA is a prerequisite for federal student loans, grants, and work-study. In addition, colleges typically require the FAFSA before distributing their own need-based aid and, in some cases, merit-based aid.

For the 2020-2021 school year, the FAFSA can be filed as early as October 1, 2019. Whether you have a senior in high school or a returning college student, it's a good idea to file the FAFSA as early as possible to increase your child's chances of getting financial aid, because some aid programs operate on a first-come, first-served basis. (For high school seniors who haven't yet been accepted at a particular college, you can list all the schools your child has applied to on the form.)

The 2020-2021 FAFSA relies on your family's current asset information and two-year-old income information from your 2018 tax return. The form is available online at fafsa.ed.gov.

In order to file the form, you'll need to create an FSA ID if you haven't done so already (be sure to follow the online instructions). You can save time and minimize errors on the FAFSA by using the built-in IRS Data Retrieval Tool, which electronically imports your tax data.

Even if you don't expect your child to qualify for need-based aid, you still might consider submitting the FAFSA. All students attending college at least half-time are eligible for federal unsubsidized Direct Loans regardless of financial need. So if you want your child to take out a loan (or your child needs to do so), you'll need to file the FAFSA. (Unsubsidized Direct Loan amounts are capped each year: \$5,500 freshman year, \$6,500 sophomore year, and \$7,500 junior and senior years.)

Keep in mind that you'll need to resubmit the FAFSA each year that you want your child to be considered for aid. Fortunately, renewal FAFSAs take less time to complete.

How can I teach my high school student the importance of financial literacy?

Even though your child is just in high school, he or she may still have to deal with certain financial challenges. Whether

this involves saving for an important purchase like a car or learning how to use a credit card responsibly, it's important for your high schooler to have a basic understanding of financial literacy concepts in order to manage his or her finances more effectively.

While financial literacy offerings in schools have increased in popularity, a recent study reported that only 17 states require high school students to take a personal finance course before they graduate.¹ Here are some ways you can teach high school students the importance of financial literacy.

Advocate saving. Encourage your children to set aside a portion of any money they receive from an allowance, gift, or job. Be sure to talk about goals that require a financial commitment, such as a car, college, and travel. As an added incentive, consider matching the funds they save for a worthy purpose.

Show them the numbers. Use an online calculator to demonstrate the concept of long-term investing and the power of compound interest. Your children may be surprised to see how fast invested funds can accumulate, especially when you match or contribute an additional amount each month.

Let them practice. Let older teens become responsible for paying certain expenses (e.g., clothing and entertainment). The possibility of running out of their own money might make them think more carefully about their spending habits and choices. It may also encourage them to budget their money more effectively.

Cover the basics. By the time your children graduate from high school, they should at least understand the basic concepts of financial literacy. This includes saving, investing, using credit responsibly, debt management, and protection planning with insurance.

¹ Survey of the States, Council for Economic Education, 2018
